

Fiido C11 - The TOP functional city

E-bike under \$900

Fiido, a leading brand in the electric bicycle industry, is delighted to introduce its latest offering, the Fiido C11.

The Fiido C11 is an upgraded version of the Fiido D4S. The D4S has gained recognition from numerous users for its reliable quality and excellent riding experience. However, many users have provided feedback regarding certain drawbacks such as the non-removable battery and non-disc brakes. Taking into account these valuable suggestions, we have introduced the classic city commuter eBike, the Fiido C11.

Please take a moment to explore further, as you will discover that we have carefully considered the needs of every rider. Whether it's in terms of design, features, or price, we have strived to provide a comprehensive solution. This is also Fiido's gift to users to celebrate Fiido's 8th anniversary.

Affordable with multi-functions

Priced at an incredibly affordable \$899, the Fiido C11 sets a new standard for value in the eBike market. With its sleek design and attention to detail, this affordable city eBike allows riders to make a statement while enjoying the convenience of electric mobility.

The Fiido C11 features a range of premium components, including a hydraulic brake system that ensures precise and reliable stopping power, promoting safety on urban streets. The bike is equipped with removable batteries, allowing for easy charging and extended riding range, while the front suspension provides a comfortable and smooth ride on uneven surfaces.

With a Shimano 6-speed gearing system, riders can effortlessly navigate various terrains, adapting to their preferred level of assistance. The throttle trigger feature offers immediate acceleration, eliminating the need for constant pedaling.

To enhance rider comfort, the Fiido C11 features an adjustable handlebar, allowing riders to find their optimal riding position. The saddle, designed by Velo, ensures a comfortable and enjoyable experience, even during long rides.

The LCD display on the Fiido C11 provides essential ride information, such as speed and battery level. Additionally, the display incorporates a convenient USB charging function, enabling riders to charge their mobile devices on the go. The tail light automatically illuminates when the brakes are applied, enhancing visibility and safety in low-light conditions.

For riders' convenience, the Fiido C11 comes equipped with a sturdy rear rack, providing ample space for carrying belongings and essentials. Additionally, the bike features a super loud horn, ensuring increased safety and effectively alerting pedestrians and vehicles.

What Fiido said about C11

"We are thrilled to present the Fiido C11, an eBike that embodies our brand's commitment to style, affordability, and quality," said CTO Keven Wang at Fiido. "We believe that electric mobility should be accessible to all, and the Fiido C11 delivers on that promise."

The Fiido C11 is now available for purchase, offering riders a stylish and affordable eBike option that combines functionality with an eye-catching design. For more information about Fiido and its range of products, please visit [Fiido.com](https://fiido.com).
